

Corona crisis causes cybercrime boom

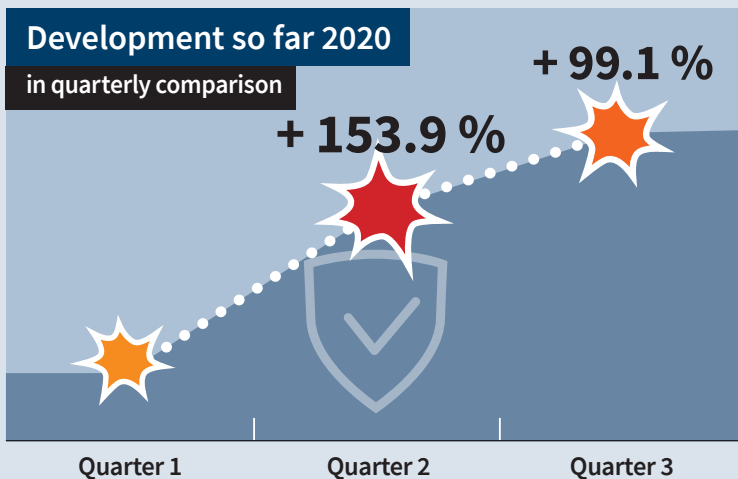

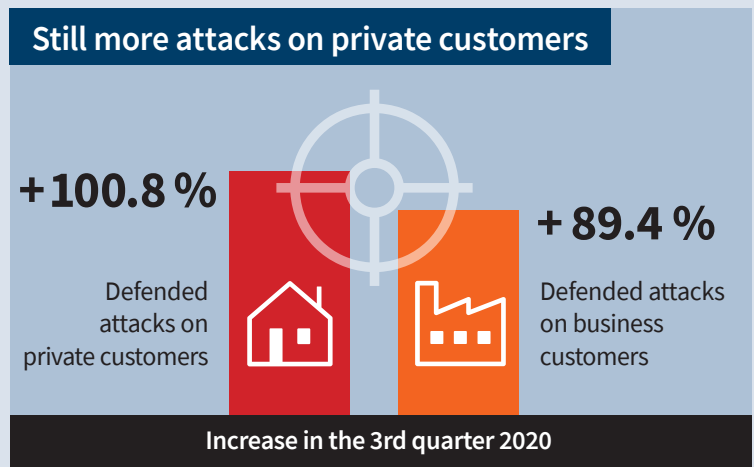

Cyber criminals continue to use the **Corona pandemic** to attack companies and consumers.

There can be no talk of relaxation. The figures are still moving towards a high level and are particularly **extremely high** compared to the beginning of the year.

Many employees still work in the **home office** or are online more often in private, to use streaming services or to shop online.

Cyber criminals consistently exploit this and are constantly developing new **attack scenarios**, with which they are trying to take protective measures to bypass.

The **sharp increase** in attempted attacks on networks and IT systems has also had a positive impact in the third quarter of the year.

Gozi, Agent Tesla, Emotet as well as **Ranumbot/Glupteba** were particularly active. Malware that has been making trouble for a long time and causing a lot of damage.
